

MICROSOFT EXCEL DASHBOARD PROJECT

Plant Sales & Pricing Analytics Dashboard

Interactive Business Intelligence Dashboard for Plant Product Analysis

Prepared by: ABHIJEET VIJAYVARGIYA

Project Overview

The Plant Sales & Pricing Analytics Dashboard is an interactive Microsoft Excel dashboard developed to analyze plant product information from multiple business perspectives. It helps understand pricing strategies, discounts, customer ratings, plant categories, brands, sizes, and product availability — transforming raw product data into meaningful visual insights that support better business decisions.

Pricing

Discounts

Ratings

Categories

Project Objectives

Analyze plant pricing trends

Compare Original vs Special Price

Monitor product discounts

Evaluate customer ratings

Analyze plant categories

Study brand-wise distribution

Identify location-wise availability

Understand plant sizes

Build an interactive Excel dashboard

Generate business insights via visualization

Problem Statement

Businesses selling plants often struggle to monitor pricing strategies, discounts, customer satisfaction, product categories, and brand performance from raw spreadsheet data. The goal is to convert this raw data into an interactive dashboard that provides actionable insights.

Without a Dashboard

- Data is difficult to analyze
- Pricing decisions become slow
- Product comparison takes time
- Brand performance is unclear
- Customer preferences stay hidden
- Decision-making becomes inefficient

With the Interactive Dashboard

- Instant, visual data analysis
- Faster, confident pricing decisions
- Quick product & brand comparison
- Clear view of top-performing brands
- Customer preferences revealed
- Efficient, data-driven decisions

vs

Dataset Overview

The dataset contains plant product information across the following fields:

ID	Plant Date	Name	Original Price	Special Price	Discount
Rating	Plant Size	Type	Location	Brand Name	Return

Dataset cleaned in Excel

Missing values handled

Data formatted

Ready for dashboard creation

Data Preparation Workflow

Cleaning & Formatting

- Removed duplicates
- Checked missing values
- Standardized formats

Analysis & Dashboarding

- Created Pivot Tables
- Used slicers
- Created KPIs & interactive charts

Dashboard Overview

PLANT SALES ANYLYSIS

The dashboard provides interactive visual analysis of plant pricing, discounts, ratings, brands, locations, and product categories.

Key Insights

Higher discounts attract more customers

Ratings reflect product quality & satisfaction

A few brands dominate the market

Certain locations show higher availability

Price varies across plant categories

Special prices strongly influence purchases

Plant sizes vary across brands

Discount strategy drives competitiveness

Business Recommendations

Optimize pricing strategies

Focus on highly-rated products

Promote top-performing brands

Monitor return patterns

Increase discounts on slow-moving products

Expand availability in high-demand locations

Improve low-rated products

Update pricing based on market trends
